

# **Users Tasks and Goals**

## **User Tasks:**

The tasks that can be performed by the users on the visualized data are:

- The user can identify the region which is higher or least affected by the COVID-19.
- The user can identify the count of the cases which are confirmed, based on the region.
- The user can identify the count of the cases which are confirmed, based on gender.
- The user can identify the count of the cases which are confirmed, based on recovery, i.e., the number of cases in which the patients are recovered and not recovered.
- The user can identify the count of the cases which are confirmed, in a specific week.
- The user can identify the relation between the count of the cases which are confirmed, and the week date which includes the start and end date of the week.
- The user can identify the trend of the confirmed cases for the age group.

## **Users Goals:**

Users can achieve the following goals by performing the tasks on the visualized data.

- The user can come up with plans and strategies that help in preventing and controlling the spread of COVID-19.
- The user can respond to health emergencies.
- The user can provide vital information regarding the COVID-19 to the users.
- The user can bring awareness of COVID-19 among people.
